SUMMARY

Senior Software Engineer with 8+ years of experience building and operating production-grade SaaS and enterprise systems across full-stack development, cloud platforms, DevOps, and data-intensive applications. Strong background in Python, C#, AWS, CI/CD, RESTful and event-driven architectures, with hands-on experience delivering scalable, reliable software in cross-functional environments. Experienced in taking features from discovery to production, improving system performance, supporting production operations, and using AI-assisted development tools such as Claude Code and GitHub Copilot with a human-led verification mindset.

TECHNICAL SKILLS

- Programming: Python, C#, SQL, Bash, TypeScript, JavaScript, Java, C++
 - Cloud & DevOps: AWS (EC2, ALB, ASG, RDS, S3, SQS, SNS, CloudWatch), Azure (App Services, Functions, Service Bus, Azure SQL), Jenkins, GitLab CI/CD, GitHub Actions, Azure DevOps, TeamCity, Octopus Deploy
 - Architecture: Microservices, distributed systems, RESTful APIs, event-driven systems
 - Observability & Operations: CloudWatch, Datadog, Logz.io, production support, incident investigation, root-cause analysis
 - Databases: PostgreSQL, SQL Server, MySQL/MariaDB, MongoDB
 - Engineering Practices: CI/CD, TDD, integration testing, code review, Agile/Scrum, Clean Code, SOLID
 - AI-assisted Engineering: Claude Code, GitHub Copilot, AI-assisted prototyping, refactoring, and code review.
-

EDUCATION

- **MSc in Software Design with Cloud Native Computing** | Technological University of the Shannon (TUS), Ireland | Sep 2025 – Sep 2026 | Modules: Microservices Architecture, Continuous Build Delivery (CI/CD, Docker, Kubernetes), Object-Oriented Programming (Java), Applied Scripting Languages (Python), Engineering Team Projects, Research methods & professional practice, and dissertation/industry placement. Current focus: AWS services (EC2, ALB, ASG, RDS, SNS, CloudWatch, Launch Templates), Docker, Kubernetes, and CI/CD automation.
- **MSc in Information Technology** | Military Institute of Engineering, Brazil | 2020-2022 (unfinished) | Modules: Development of Computational Platforms to Support Decision Making, Machine Learning, Applied Artificial Intelligence, Computer Systems Development, and Algorithm Design and Analysis.
Thesis Work: Detecting hate speech in images published as comments on social media.
- **Bachelor's Degree in Computer Science** | Centro Universitário Carioca, Brazil | 2013-2018

Further Education & Certificates

- Formação Ouse com o Framework Vue.js 3 (40h) | Alura, online - 2025
- Green Software for Practitioners (2h) | The Linux Foundation, online – 2023

CAREER BACKGROUND

Software Developer | Screendragon, Ireland | Mar 2025 – Present

IT Services and IT Consulting

- Design and deliver APIs and web application features for a SaaS platform, with a focus on scalability, reliability, and production readiness.
- Work cross-functionally with engineering and product stakeholders to shape requirements, review designs, and turn business needs into production features.
- Improve release speed and deployment consistency by automating build and delivery workflows using Jenkins and GitLab CI/CD.
- Contribute to a fast feedback engineering culture through code reviews, maintainability improvements, and DevOps best practices.
- Use AI coding tools such as Claude Code and GitHub Copilot to accelerate prototyping, refactoring, and implementation, while maintaining human-led review and accountability for production output.
- **Achievements:** Successfully meet both technical and consumer needs.

Successful Projects

- **Unity (SaaS Platform):** Designed, developed, and optimized the platform for scalability and reliability, delivering new features and improving customer experience **Technologies used:** .NET Core 3.1, .NET Framework 4.6.2, VueJs, Bootstrap, MariaDB, MongoDB, SQL Server, GitLab, YourTrack JetBrains, AWS and Azure.

Full Stack Developer/SQL Database Developer | Version1, Ireland | Mar 2022 – Mar 2025

IT Services and IT Consulting

Built and maintained front-end and back-end components for enterprise applications using .NET and Vue.js, supporting production systems used by large multinational clients.

Developed RESTful APIs, optimized SQL Server workloads, and improved application performance, reducing main system page load times by 60%.

Automated deployments through TeamCity and Octopus Deploy, improving release efficiency and operational reliability in production environments.

Designed and implemented database models, ETL pipelines, and maintainable enterprise modules with a focus on long-term system health.

Supported modernization efforts, including legacy migration and performance tuning, balancing short-term delivery with production-grade engineering standards.

Achievements: Achieved a 60% reduction in the main system page loading time through performance tuning and refactoring.

Successful Projects

- **Operation Management System (DePuy /Johnson & Johnson):** Supported migration of legacy front-end code from VB to JavaScript.
- **Imperium | Client: Wood Group UK Ltd (May 2022- Mar 2023):** Designed and developed enterprise modules, improving maintainability and system performance. **Technologies used:** .NET Core 3.1, .NET Framework 4.6.2, Bootstrap, VueJs, Bootstrap, NServiceBus, SQL Server, Octopus Deploy, and TeamCity.

Full Stack Engineer/DevOps/SQL Database Admin | Radix Engenharia e Software, Brazil | May 2019 – Jan 2022

IT Services and IT Consulting

- Designed and delivered full-stack applications with C# and Angular for mission-critical business workflows .
- Configured CI/CD pipelines in Azure DevOps and automated deployments across environments, increasing delivery consistency and reducing manual operational overhead .
- Built and supported production systems for clients in energy and industrial sectors, including high-availability and business-critical applications .
- Performed testing, tuning, and production support activities, helping systems evolve from implementation to stable day-to-day operation .

Achievements: Delivered mission-critical applications that met complex business and technical requirements while improving operational efficiency and customer satisfaction.

Successful Projects

- **Order Management (ChampionX):** Automated field order processing, increasing productivity across Sales, Operations, and Finance.
- **BluOps (ChampionX):** Migrated multi-environment Azure applications and databases, ensuring continuity and stability.
- **SACG (ONS):** Built critical system for calculating and controlling electricity distribution across Brazil and neighboring countries.
- **Client: ChampionX - Technologies used:** C#, .Net Core 3.0, Angular 7, MVC, Azure Function, SQL Server, and Azure App Services.
- **Client: Operador Nacional do Sistema Elétrico (ONS) - Technologies used:** C#, .NetCore 3.0, Angular 7, MVC, SQL Server, Entity Framework, and Azure App Services.

Software Developer | BigData Corp, Brazil | Sep 2017 - Apr 2019

Cloud and Information Technology Industry

- Developed cloud services, APIs, and distributed data platforms for high-scale client use cases, including financial and marketplace systems .
 - Worked with Python, AWS, MongoDB, and observability tooling to build and operate scalable services and data-intensive workloads .
 - Supported production environments through monitoring, issue investigation, and continuous improvements to reliability and cost efficiency .
 - Delivered scalable solutions that reduced client costs by 50% and supported multimillion-dollar contracts .
- Achievement** - Designed scalable solutions that reduced client costs by 50% and supported multimillion-dollar contracts.

Successful Projects

- **Judge Dredd:** Built distributed system to capture and process millions of public lawsuits in Brazil.
- **News & Jarvis:** Developed scalable data pipelines for news portals and Latin American marketplaces, supporting strategic clients (Itaú, PayPal, LATAM).
- **PacMan:** built a scalable product-data ingestion and storage platform for major Brazilian supermarkets, enabling fast analytics and catalog search.
- **Client: Itaú / Serasa Experian / Boa Vista SCPC / Boa Consulta / PayPal / LATAM / Certisign - Technologies used:** C#, .Net Core 3.0, MVC, Python 3, MongoDB, Logz, Datadog, Amazon Web Services (S3, SQS, EC2, Lambda Function), and Microsoft Azure (Azure App Services, Azure Function, Service Bus Queue).

Web Developer Intern | Fiocruz, Brazil | Nov 2014 - Sep 2017

Research Institute

- Analysed, debugged, and developed scripts for the optimization of import and export records.

Successful Projects

- **Arca:** Developed system to store and manage all intellectual and scientific production of the institution.
- Technologies used:** Java 8, Python 2, Linux Server, PostgreSQL, Vagrant, and Bootstrap.

Achievements

- Customers identified 50% of cost reduction.
- Customers signed two new contracts.
- Optimized resources equated to several million dollars in annual value creation.
- The first team achieved 100% digital inventory management of assets.
- Provided strategic guidance to clients on general technology and IT infrastructures.
- Migrated environments between azure, improved security, and backup policies.
- Promoted and bonused within 1 and a half years due to outstanding performance. Trained five new employees.

PERSONAL PROJECTS & EVENTS

- AWS Summit London | Apr 2025.
 - Microsoft Azure Virtual Training Day: Data Fundamentals | Set 2024.
 - GitHub and Azure: Better Together! | Sep 2024.
-

GENERAL SKILLS

- **Languages Skills:** Portuguese: Native | English: Advanced
- **Soft Skills:** Customer focus and adaptability to different personality types. Ability to multitask, set priorities, and manage time effectively. Strong phone and verbal communication skills along with active listening. Ability to manage multiple projects simultaneously with a constant eye on quality. Excellent attention to detail and known for quickly adapting to new technologies through self-learning and for balancing independent problem-solving for complex systems with strong teamwork, collaboration and technical mentoring.
